Summary

Intermediate software engineer with strong full-stack and systems development experience. Delivered a Django/React web application for controlling optical ground stations and built C++/C device drivers using INDI Astronomy, improving hardware configurability. Co-founded a game studio and led Unity C# development for a published title, demonstrating end-to-end product delivery. Seeking to apply proven engineering and leadership skills to drive innovative solutions in a fast-paced development team.

Experience

MBRYONICS

Apr 2024 - Apr 2026

Systems Software Engineer

Galway, Ireland

- Developed a full-stack web application with Django and React, version-controlled in GitHub, enabling users to remotely control optical ground stations and reducing setup time by streamlining command execution
- Engineered device drivers in C++ and C using the INDI Astronomy library, integrating them into the Linux control stack and improving hardware communication reliability
- Built a universal web interface with HTML, CSS, and JavaScript for configuring hardware products, hosted in Docker containers and accessed via Slack notifications, which simplified configuration workflows for engineers
- Managed development environments on Windows and Ubuntu Linux, coordinating code reviews via GitHub and facilitating cross-platform testing, which ensured consistent performance across operating systems
- Created a Python-based internal tool to track project hours, storing data in a shared repository and integrating with Slack alerts, helping the team monitor funding utilization
- Developed a custom sprint retrospective tool using React and Express, enabling the team to capture feedback more efficiently and streamline sprint reviews
- Mentored two software engineering interns, guiding them in code reviews, GitHub workflows, and project-management practices, which helped them deliver their first features on schedule

DELIMIT STUDIOS

Jan 2022 - Jun 2023

Co-Founder and Lead Programmer

Galway, Ireland

- Created the video game "It's All in Your Head" using Unity, C#, and JavaScript frameworks, delivering a playable prototype to early testers
- Wrote C# code in Unity to implement core gameplay mechanics, integrating assets from artists and the audio engineer, which enabled smooth player interactions
- Worked with a team of 2–5 programmers, 2 artists, and 1 composer/audio engineer, coordinating tasks through Slack and supervisor meetings to keep development on schedule

JOULICA

Jan 2022 - Sep 2022

Software Engineering Intern

Galway, Ireland

- Managed and version-controlled Ingress configuration files using Kubernetes and Git, ensuring consistent routing for all services across environments, which eliminated deployment failures caused by routing errors
- Developed a responsive web application with Angular and TypeScript that integrated JOULICA's in-house APIs, enabling users to retrieve and visualize data in real time, which increased internal tool adoption by the team
- Leveraged Kubernetes, Jenkins, AWS, Java, TypeScript, CSS, and HTML to build and deploy the application, streamlining the CI/CD pipeline and reducing deployment time by half

ERICSSON

Jun 2021 - Aug 2021

Software Engineering Intern

Galway, Ireland

- Tested team-developed user interfaces manually, using Chrome DevTools and logging defects in JIRA; ensured UI functionality before release, reducing rework for developers
- Maintained internal system user accounts for multiple teams, updating permissions via the admin portal and coordinating changes through MS Teams; kept user access accurate, supporting uninterrupted team workflows

Projects

University Final Year Project

Jan 2023 - Apr 2023

Galway, Ireland

- Developed Final Year Project "Music Generator using Neural Network"
- Built a website that generates piano notes based on a user inputted list of notes
- Developed a Python program using the TensorFlow library to train a neural network
- Used HTML, JavaScript and CSS to create the frontend of the website

Deckify

Jan 2026 - Present

Toronto, Canada

- Built a full-stack flashcard learning platform inspired by Spotify's discovery experience, enabling users to create, organize, and explore educational decks through an intuitive interface.
- Designed a scalable PostgreSQL database schema using Supabase to manage users, flashcard decks, progress tracking, and personalized learning data.
- Developed a responsive, component-driven frontend with Next.js, TypeScript, and Tailwind CSS, delivering a fast and accessible experience across devices.
- Implemented secure user authentication and data management workflows using Supabase services and PostgreSQL row-level security.
- Created reusable React components and TypeScript interfaces to improve maintainability, reduce duplication, and enforce type safety across the application.
- Engineered dynamic deck discovery features inspired by music streaming platforms, improving content organization and user engagement.
- Optimized application performance through Next.js server-side rendering, efficient data fetching, and modern frontend optimization techniques.
- Built a relational data model supporting future expansion into features such as recommendations, social sharing, and learning analytics.

It's All In Your Head

Jan 2021 - Mar 2022

Galway, Ireland

- Served as lead developer for a Unity-based game project, overseeing technical architecture, implementation strategy, and team collaboration for a 2–5 person development team.
- Applied object-oriented programming principles in C# to create scalable gameplay systems and maintain clean, extensible code.
- Built interactive gameplay features using Unity's game engine, including event-driven mechanics, player systems, and narrative progression logic.

Type Master

Apr 2025 - Present

- Architected a real-time multiplayer application with synchronized client states, event-driven gameplay logic, and low-latency communication between players.
- Implemented networking systems to manage matchmaking, live game sessions, and real-time player interactions.
- Developed efficient algorithms for text input processing, scoring, and ranking players during competitive matches.
- Designed extensible game systems capable of supporting future features such as matchmaking improvements, player statistics, and leaderboards.

Skills

- **Skills:** TypeScript, JavaScript, C#, Python, SQL, HTML, CSS, Java, C++, React, Next.js, React Native, Tailwind CSS, Responsive Web Design, Component-based Design, State Management, UI/UX Implementation, Node.js, REST APIs, API Design, IAM, Authentication Systems, Database Integration, Backend Architecture, PostgreSQL, Supabase, Firebase, Database Design, Unity, Networking, Object Oriented Programming, Docker, Kubernetes, Git, Github
- **Leadership:** Technical Leadership, Team Coordination, Project Planning, Code Review, Mentorship, Sprint Planning, Agile, Documentation, Product Development

Education

University of Galway, Ireland

Bachelor of Computer Science, Computer Science

Sep 2019 - Nov 2023

Galway, Ireland
